Mr. Andrade's Grade 5 Class

Dear Parents and Guardians,

It was lovely to meet many of you during our Meet the Teacher night! October has gone by incredibly fast. Here's all that is happening inside Grade 5:

Math:
We are currently deep into our Number Sense unit. Students are learning to read and represent numbers up to 100,000. We are also learning how to scale down to tenths and hundreths while showing all of our work. The class came out with an average grade of 80% for their recent math quiz, so students seem to be improving their understanding of the concepts. I suspect this unit will take us until around the middle of November.

Literacy:
As we have continued to learn more about what a biography looks like and sounds like, students have completed weekly spelling tests, along with a daily reading of the novel they selected for a short book report. Our literacy periods often consist of a mix of reading, spelling and short writing prompts to improve prose and grammar. More to come for the biography project in November.

Science:
We have continued to investigate Human Life and Body Systems. So far, we have covered 4 of the 5 Major Body Systems (Respiratory, Circulatory, Digestive, etc.) and have learned how they interact with each other. In the next couple weeks, students will be introduced to a new assignment which will get them to "play doctor" and diagnose diseases based on the information we have covered.

Arts:
Students completed one of my favourite assignments, called Candy Shoe Art. They all did a wonderful job of designing a shoe based on a candy/chocolate brand. We

are onto Concentric Circles and working on colour theory. In November, we will begin to explore drama more intentionally as well.

Social Studies:

We have continued with our unit talking about the world and Canada before 1500. The class has maintained their focus and enthusiasm for the content as we've discussed important figures and their accomplishments during this time. The students each completed a short biography of an explorer, and will continue their

learning into the interactions between Europeans and Indigenous peoples in the coming weeks.

Phys.Ed/Health:
In Physical Education, we are just finishing up our basketball unit, and are competing in small games between balanced teams in the gym. Meanwhile, health has continued with us learning more about healthy living, and the positive impacts it can have on human beings.

Announcements/Important Dates:

- November 11: Remembrance Day Assembly
- November 13: Progress Reports go home

As always, feel free to reach out if you have any questions or concerns!

All the best,

Nate Andrade
